2	Prototype Selection	2
2.1	Reasoning and Motivation	2
2.2	Selected Screens	2
2.3	Tool Used	2
3	Figma prototypes	3
3.1	Dashboard and Planning Screens	3
3.2	Prototype Link	5

1 Introduction

1.1 Team Members

- Jiahao Guo jiahao.guo@studio.unibo.it
- Kalike Horri kalile.horri@studio.unibo.it
- Intisar Bel meddeb Intisar.belmeddeb@studio.unibo.it

2 Prototype Selection

2.1 Reasoning and Motivation

The web app was chosen over the smart-glasses prototype because it aligns directly with Ecobnb's primary goal: helping users to learn importance of sustainability. The smart-glasses concept required specialized hardware and introduced unnecessary complexity, while the web app supports a realistic, accessible, and impactful improvement of the current service.

2.2 Selected Screens

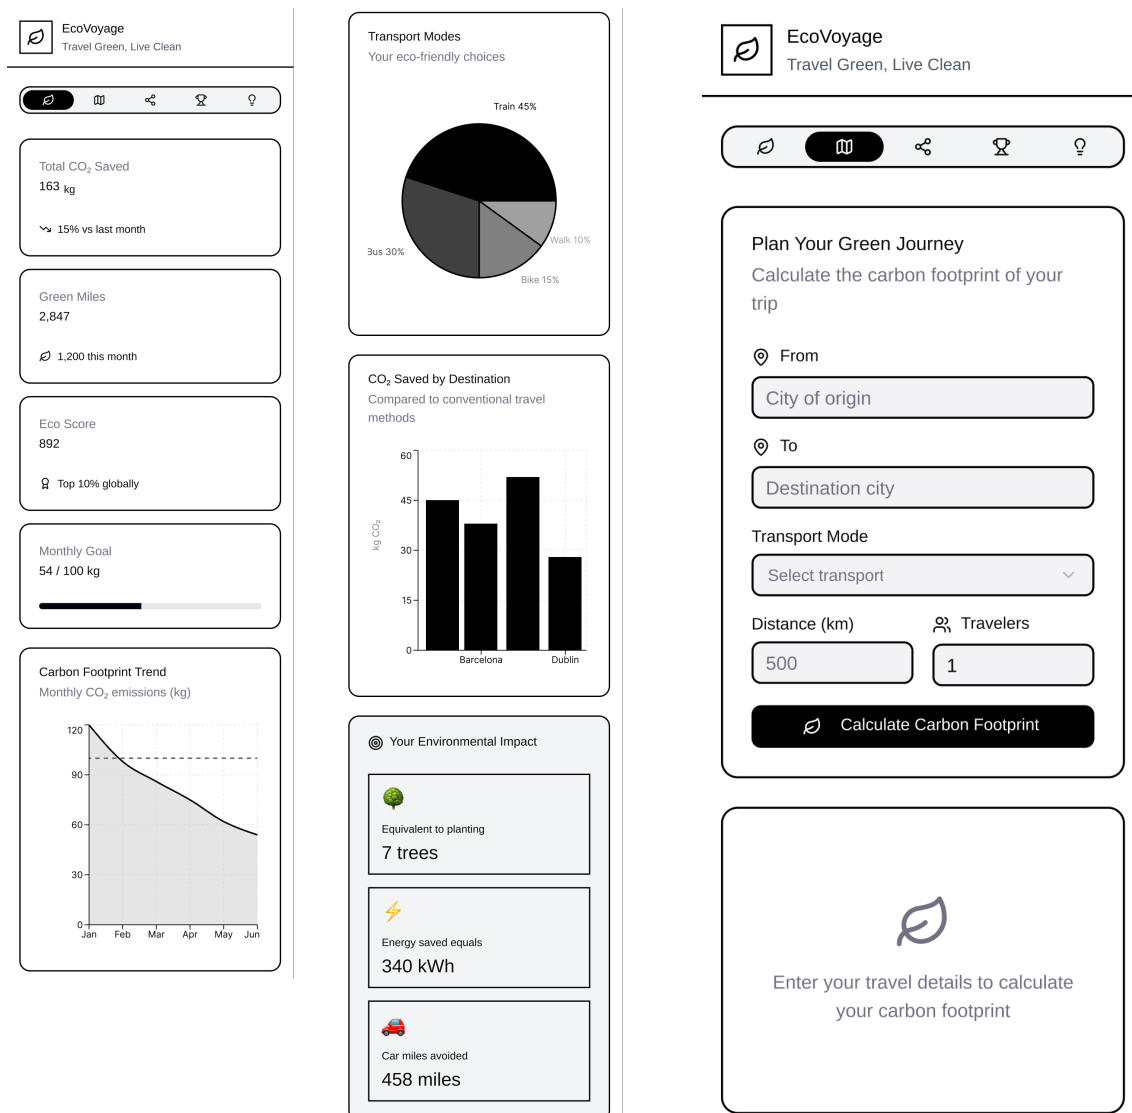

The two selected screens are the **Dashboard Page** and the **Planning Page**. These screens represent core functionalities of the user journey, focusing on monitoring green habits, CO₂ impact, and overall sustainability progress. They were selected because they directly support the main goals of the system and provide essential feedback on the user's environmental performance.

2.3 Tool Used

The prototype was created using the design tool **Figma**, chosen for its collaborative features, component libraries, and efficient iteration workflow.

3 Figma prototypes

3.1 Dashboard and Planning Screens

Dashboard of EcoGO.

Planning page of EcoGo.

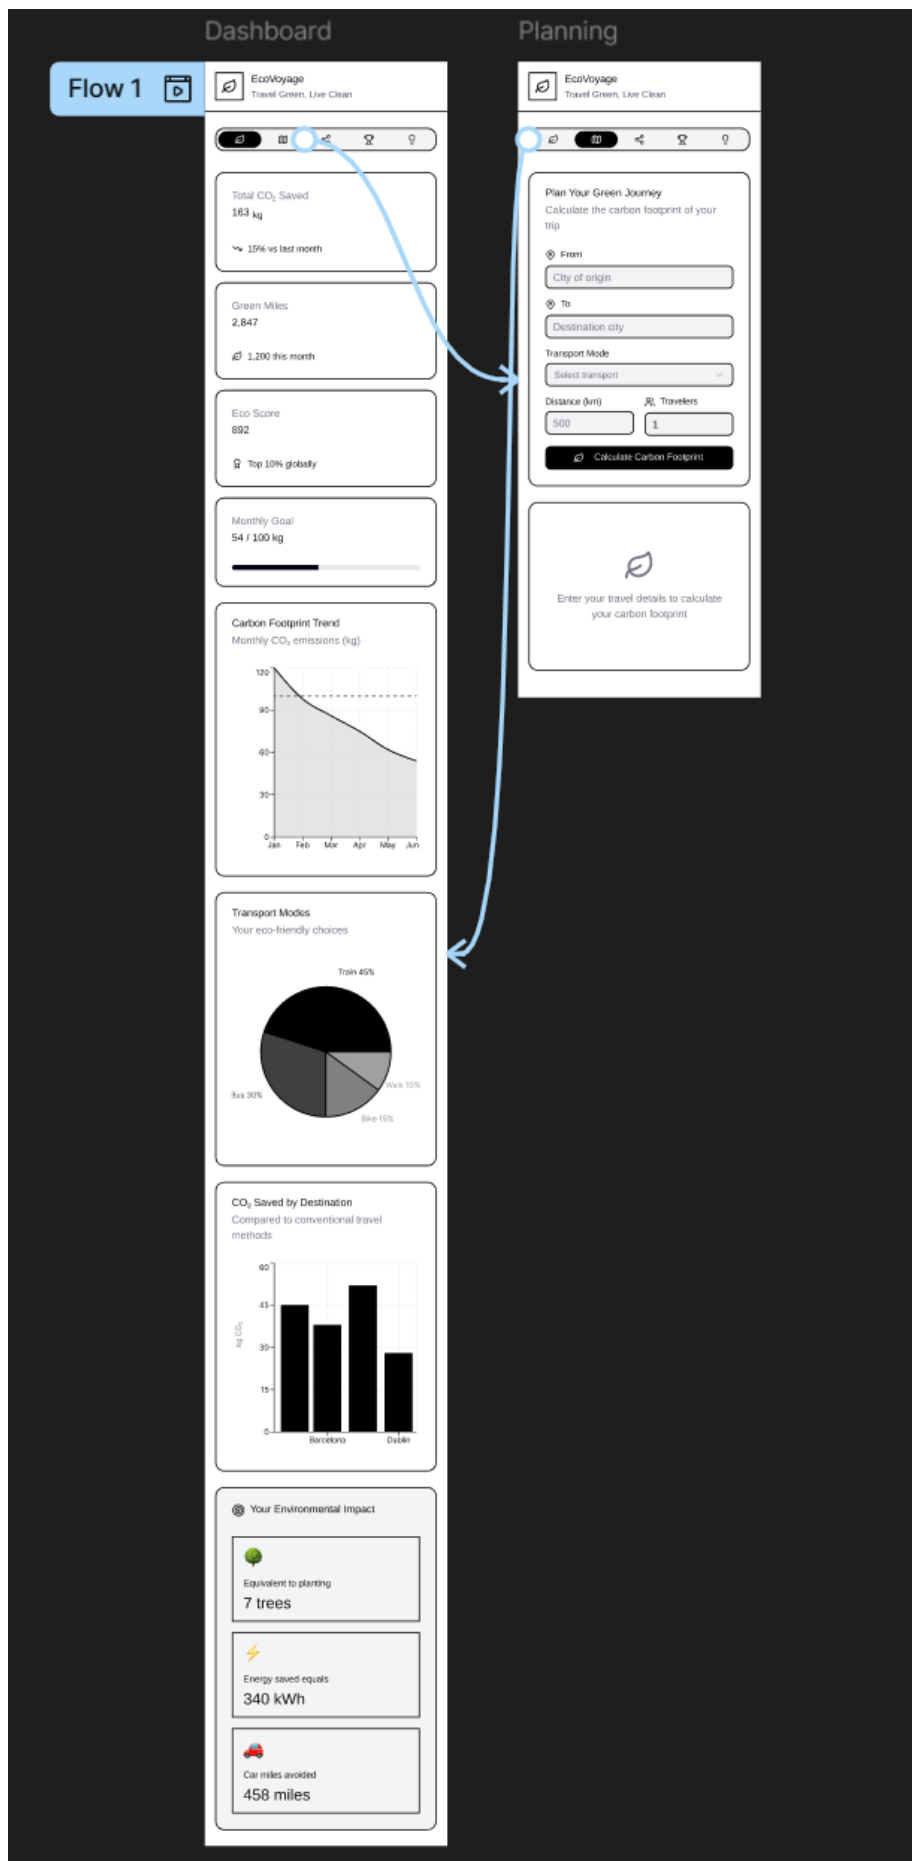

Figure 1: Flow Dashboard - Planning

3.2 Prototype Link

The publicly accessible link to the two screens is reported below:
